

## Case Study – 5

### OGDCL Exchange Server Project with Microsoft

#### Introduction

OGDCL is a leading Oil & Gas Development Company of Pakistan. Techaccess Pakistan has always maintained a constant relationship with OGDCL by providing the company with the most appropriate IT solution based consultancy. Recently we have implemented a successful migration from the client's messaging system to Microsoft Exchange Server 2010 for over 2,000 employees.

#### Customer Challenges

- OGDCL's messaging system had outdated features, which were no longer in use. Techaccess Pakistan had to migrate a workforce of over 2,000 employees to the new Exchange Server
- The new server migration also had to be virtualized. For this, Techaccess Pakistan used VMware's ESXI, type-1 enterprise-class Hypervisor v5.0. Solution

#### Benefits of the technology

- As a result of the virtualization attempt, OGDCL was able to cut down its power costs and utilize the newly installed Exchange Server to its optimal potential
- The new Exchange Server 2010 also came with ActiveSync feature, which allowed the workforce of 2,000+ to integrate their emails onto their smartphones, thus enhancing portability
